

CHL 5115 Qualitative Analysis and Interpretation¹

Fall, 2014, Tuesdays 1:00 – 4:00 p.m.

Brenda Gladstone, PhD
Assistant Professor
Dalla Lana School of Public Health, University of Toronto
155 College Street
E-Mail: Brenda.gladstone@sickkids.ca

Class Location: HA 316 (Haultain Building)

Purpose

This is an advanced graduate-level course in qualitative research methodology that focuses on the theory, techniques and issues of data analysis and interpretation. It is a course in the *Essentials in Qualitative Research* course series offered through the collaborations in the Centre for Critical Qualitative Health Research (*CQ*, www.ccqhr.utoronto.ca). The course is designed for students taking qualitative approaches to their thesis research i.e. using both qualitative forms of data and qualitative (non-numeric, interpretive) forms of analysis. Ideally students should be in the late data gathering and analysis phase of their research, although students at the proposal writing and pre-data collection stage also benefit from the course. The course aims to give students knowledge and experience in concrete analysis practices, but also to enhance their ability to articulate and address the core theoretical and methodological issues of qualitative inquiry. Although the topics discussed are generic to qualitative methodology, the literature and class instruction draw heavily on the field of health and on the instructor's own disciplinary background in the sociology of health and illness and of childhood; and substantive topic area of mental health and illness.

Prerequisites

Students taking this course need to have prior training and/or experience with qualitative research. Knowledge of the theoretical and philosophical fundamentals of qualitative inquiry, and of data collection, is expected. Students should have their own data/research plan to use in the course. Permission from the instructor is required for enrollment. A maximum of 15 students can be in the course at one time. Audits are not generally accepted. Priority is given to students in departments/faculties that are 'contributing' members in *CQ*, and to those with optimal backgrounds and current research situations for benefiting and contributing to the course.

Objectives

This course aims to develop in students a deeper marvel for, enjoyment of, and skill in qualitative research. At the end of the course students should have made significant progress towards being able to understand and articulate:

¹ The syllabus is adapted from the original version designed by Professor Joan Eakin

1. what it means to *critically* analyze and interpret qualitative data, including the difference between value-added analysis and primary description.
2. the role, place, significance and timing of theory in the analysis process
3. the implications for analysis and interpretation of the data collection, transformation and management process
4. the complexity and implications of the interpretation of ‘meaning’
5. the role of the researcher in analysis, and the significance of standpoint
6. the notion, practice and significance of methodological reflexivity, and its role in the research process
7. the constitutive effects of writing on the analysis, and the different ways of representing the results of qualitative inquiry and their implications
8. issues associated with judging research quality in qualitative inquiry
9. the importance of being able to write and articulate convincingly the nature, value, and limitations of your analytic process and of qualitative methodology more generally.

Course Outline

1. Sept 09 **Introduction**

Introduction to interpretive qualitative analysis; varieties of analytic approaches; ‘value-added’ analysis; place in the research process; key features; exemplar; overview of course; how to ‘do’ the course; resources.

2. Sept 16 **Key considerations in analysis & interpretation**

What is (not) ‘analysis’? Significance of: the researcher, theoretical perspective, how data are produced, and context. Core concepts and assumptions; double (triple) hermeneutics; the ‘everything is data’ maxim.

3. Sept 23 **Data transformations**

From *in vivo* to tape to transcription to analysis: what is lost and changed; politics and practicalities; implications for interpretation.

4. Sept 30 **Reading and interrogating data**

Meaning and its interpretation; notion of ‘analytic devices’; making strange; reflexivity as resource; different approaches to understanding data; layered, relational, narrative readings; contradiction; negation; counter-imaging.

**Assignment 1 due in Sept 30 (submit in class)*

5. Oct 07 **Coding**

Theory, practice, implications; types of codes; codebooks, coding as means not end.

6. Oct 14 **Working with and beyond codes**

Spreadsheets; capturing the gestalt; reconstituting, recontextualizing & summarizing data.

7. Oct 21 Conceptualizing I

Analytic memoing; analytic generalization; types/levels of concepts; generating concepts.

8. Oct 28 Conceptualizing II
(Guest: Elaine Stasiulis)

Developing, situating and linking concepts; pursuing hunches; comparison; thought operations; situational analysis. Examining Institutional Ethnography: an example of how different ontologies require particular analytic strategies; re explicating the social relations of a setting via writing data into stories and mapping.

9. Nov 04 Analyzing different types of data: Visual data

Explore insights generated by analytic questioning of images, their production, and intended/imagined audiences: three interrelated meaning-making sites

**Assignment 2 due Nov 4th (submit in class)*

10. Nov 11 Theorizing

Different sites, types, sources and uses of theory and their combination; transforming data and concepts into 'findings'; abductive thinking; linking macro and micro level data/ideas.

11. Nov 18 Writing I : The Story

Writing as analysis; finding the story; strategies and approaches; audience; the politics of representation; positioning the story; taking sides.

12. Nov 25 Writing II: The Words; Describing the analytic process

Significance of wordcraft and grammar; providing evidence; confidentiality; incorporating literature.

Writing about method of analysis; claiming your own inventions; key contested issues including scientific legitimacy and authority; issues of quality and rigor.

** Assignment 3 due December 2nd (submit hard copy to DLSPH Grad office Rm 620 HSB by 4:30 pm).*

Reading

For each session there are “**Required**” readings which are listed below (**bolded**) by session. All required readings are available in pdf form through the Portal Blackboard. One hard copy of each “Required” reading is available for class use and can be borrowed from the instructor.

For most sessions there is also a section following the list of required readings called “**Additional**” readings. The Additional readings include other reading on the topic that might be useful for students wishing to go further. They consist largely of readings the instructor has found useful, and/or have been used in previous years of teaching the course. Many of these additional references are annotated to give you some sense of what they offer or focus on.

A variety of “**General**” readings and resources regarding qualitative analysis (journals, methodology texts, special topics) are also listed at the end of the course syllabus.

1. Introduction

Recommended (not required):

Jardine, D. The fecundity of the individual case: considerations of the pedagogic heart of interpretive work”, *Journal of Philosophy of Education*, 1992, 26 (1) 51-61 [*a beautifully expressed reflection on the nature of interpretation to be read at the beginning and again at the end of the course when it will have much more resonance*]

Atkinson, P. and Delamont, S. “Analytic perspectives” Chap 32 in Denzin & Lincoln, *Handbook of Qualitative Research*, 3rd edition, pp 821-840. [*worthwhile but challenging; not all will ‘get’ this paper, but return to it again towards the end of the course and it will make more sense*]

2. Key considerations in analysis and interpretation

Required:

Frost, N. et al “Pluralism in qualitative research: the impact of different researchers and qualitative approaches on the analysis of qualitative data”, *Qualitative Research* 2010 10 (4) 441-460. <http://qrj.sagepub.com/content/10/4/441>

Funk, L., Stajduhar, K. “Interviewing family caregivers: Implications of the caregiving context for the research interview”, *Qualitative Health Research*, 2009, 19 (6):859-867. <http://qhr.sagepub.com/cgi/content/abstract/19/6/859>

Ribbens McCarthy, J., Holland, J. and Gillies, V. “Multiple perspectives on the ‘family’ lives of young people: methodological and theoretical issues in case study research”, *Int.J.Social Research Methodology*, 2003,6,1:1-23

Additional:

General overview

Coffey, A. & Atkinson, P. ‘Varieties of data and varieties of analysis’, in *Making Sense of Qualitative Data*, Sage, 1996. Pp 1-10.

Significance of interviewing for interpretation

Rapley, T. "The art(fullness) of open-ended interviewing : some considerations on analyzing interviews", *Qualitative Research*, 2001 1(3) 3003-323.

Role, place and significance of theory in qualitative research

Giacomini, M. "Theory matters in qualitative health research", in Bourgeault, I. Dingwall, R. and deVries, R. *Qualitative Methods in Health Research*, Sage, 2010: pp 125-156. (*A comprehensive overview of the nature/uses of 'theory' in qualitative health research*)

Reeves, S. M. Albert, A. Kuper, B. Hodges "Why use theories in qualitative research" *BMJ* 13 September 2008, 337:631-634.

Gubrium & Holstein: Chapters 2,3 & 5 from *The New Language of Qualitative Method*, 1997, NY, Oxford University Press (good overview with illustration from the sociological literature of major theoretical approaches to research)

Feldman, M. *Strategies for Interpreting Qualitative Data*, Sage Qualitative Research Methods Series 33, 1995. (demonstrates what 4 different approaches would look like, ethnomethodology, semiotic analysis, dramaturgical analysis, deconstruction)

Honan, E, Knobel, M., Baker, C., Davies, B. "Producing possible Hannahs: Theory and the subject of research", *Qualitative Inquiry* 6 (1), 2000:9-32

Starks, H. and Trinidad, S.B. "Choose your method: A comparison of phenomenology, discourse analysis, and grounded theory", *Qualitative Health Research* 207, 17 (10):1372-1380.

Wilkinson, S. "Women with breast cancer talking causes: Comparing content, biographical and discursive analyses", *Feminism and Psychology*, 2000, 10(4):431-460.

3. Data transformations

Required:

Tilley, S. "Challenging" research practices: Turning a critical lens on the work of transcription", *Qualitative Inquiry*, 9 (5) 2003: 750-773

Bucholtz, M. "The politics of transcription", *Journal of Pragmatics* 32 (2000) 1439-1465.

Bischoping, K. "Quote, unquote: From transcript to text in ethnographic research:, Chap. 10 in Pawluck, D., W. Shaffir, C. Miall, *Doing Ethnography*, Canadian Scholar's Press, 2005, 141-154.

Additional:

Atkinson, P. "Transcriptions", in *Understanding Ethnographic Texts*, Sage QRM Series 25, 1992: 22-29

Edwards, J. & Lampert, M. (Eds) *Talking Data: Transcription and Coding in Discourse Research*, Hillsdale, NJ: Erlbaum, 1993.

- Ritchie, J. and Spencer, L. "Qualitative data analysis for applied policy research", in Seale, C. "Using numbers" in *The Quality of Qualitative Research*, Sage, 1999: 119-139.
- Seidel, J. & Kelle, U. 1995. Different functions of coding in the analysis of textual data. In U. Kelle, (Ed) *Computer-Aided qualitative Data Analysis: Theory, Methods and Practice* (pp 52-61. London, Sage.
- Strauss, A. and Corbin, J. *Basics of Qualitative Research*, Sage, 1990, pp.57-115(detailed procedures for coding and analyzing in grounded theory analysis)

6. Working with codes and beyond

Required:

Hollway, W. and Jefferson, T. "Analysing data produced with defended subjects" Chapter 4 in *Doing Qualitative Research Differently*, pp.55-82. Sage, 2000.

Frost, "Do you know what I mean?": The use of a pluralistic narrative analysis approach in the interpretation of an interview", *Qualitative Research* 2009, 9 (1): 9-29 .

Atkinson, P. "The ethnography of a medical setting: Reading, writing and rhetoric" *Qualitative Health Research* 1992 2(4) 451-474

Additional:

- On dealing with contradictions & inconsistencies in data*
- Blumenthal, D. "Representing the divided self", *Qualitative Inquiry*, 5(3), 1999, 377-392.
- Seale, C. "Accounting for contradictions" in *The Quality of Qualitative Research*, Sage, 1999:73-86.
- Power, E. "Toward understanding in postmodern interview analysis: Interpreting the contradictory remarks of a research participant", *Qualitative Health Research*, 2004, 14 (6): 858-865. (paper based on an assignment in this course!)
- Watson, C. "Unreliable narrators? 'Inconsistency' (and some inconstancy) in interviews", *Qualitative Research*, 2006, 6(3): 367-384.
- West, P. (1990). 'The status and validity of accounts obtained at interview: a contrast between two studies of families with a disabled child'. *Social Science and Medicine*, 30(11), 1229-1239.

7. Conceptualizing I

Required:

Becker, H. "Concepts" Chapter 4, *Tricks of the Trade: How to Think About Your Research While You're Doing It*, University of Chicago Press, 1998.

Halkier, B. “Methodological practicalities in analytical generalization” *Qualitative Inquiry*, 2012 17 (9): 787-797

Empirical example:

Gladstone, B., McKeever, P., Seeman, M. & Boydell, K. (2014). Analysis of a support group for children of parents with mental illnesses: Managing stressful situations, *Qualitative Health Research*, 24(9): 1171-1182. doi: 10.1177/1049732314528068.

Additional: (for Conceptualizing I, II and Theorizing)

Alvesson, M. and Skoldberg, K. “Illustrations of a reflexive interpretation”, pp 285-293 in *Reflexive Methodology*, 2nd ed. Sage, 2009. [*very useful example of application of ‘reflexive’ interpretation, using an example from business research*]

Allen, D. and Cloyes, K. “The language of ‘experience’ in nursing research”, *Nursing Inquiry*, 2005, 12 (2): 98-105. [*critical analytic dissection of the concept of ‘experience’, unsettling examination of a much-used concept*]

Angus, J., Kontos, P. Dyck, I. McKeever, P., Poland, B. “The personal significance of home: Habitus and the experience of receiving long-term home care”, *Sociology of Health and Illness*, 27(2), 2005:161-187. [*using a theoretical construct to makes sense of/frame findings*].

Clarke, A. Chap 3 “Doing situational maps and analysis” in *Situational Analysis: Grounded Theory After the Postmodern Turn*, Sage, 2005 pp 83-144.

Ansprach, R., “Notes on the sociology of medical discourse: The language of case presentation”, *J. Health and Social Behavior*, 1988. Vol 29 (December): 357-375 [Note: *Empirical example – read for style/content of conceptualizations*]

Danermark, B. et al. section on thought operations starting p 79 in Chap 4

“Generalization, scientific inference and models for an explanatory social science” pp 73-114 in Danermark, B. Ekstrom, M. Jakobsen, L. & Karlsson, J. *Explaining Society*, Routledge, 1997. [*methodological theory – fairly challenging but illuminating*].

De la Cuesta, C. “The craft of care: Family care of relatives with advanced dementia”, *Qualitative Health Research* 2005, 15(7):881-896. (nice example of straightforward conceptualization of findings, medium-intensity theorization).

Eakin, J., E. MacEachen, J. Clarke, “‘Playing it smart’ with return to work: Small workplace experience under Ontario’s policy of self-reliance and early return”, *Policy and Practice in Health and Safety*, 01(2),2003:19-41 [empirical example]

Frank, A. “What is dialogical research and why should we do it?” *Qualitative Health Research*, 2005 15 (7) 964-974.

Puddephatt, A., W. Shaffir and S. Kleinknecht, *Ethnographies Revisited: Constructing Theory in the Field*, Routledge, London & New York, 2009

Miller, G. & K. Fox, “The possibility of analytic dialogue between ethnography, conversation analysis and Foucault”, Chap.3 pp 35-55, in D. Silverman (Ed.) *Qualitative Research: Theory, Method and Practice*, 2nd Ed., Sage, 2004 [*very good but may be challenging for some*]

Orona, C. "Temporality and identity loss due to Alzheimer's disease", *Social Science and Medicine* 30(11) 1247-1256, 1990 (classic description of conceptualization process).
 Pawluch, D. "Conceptualizing a profession in process: the New Pediatrics revisited", in Puddephatt, A., W. Shaffir and S. Kleinknecht, *Ethnographies Revisited: Constructing Theory in the Field*, Routledge, London & New York, 2009, pp. 318-330 [*finding the focus in a dissertation project; re-conceptualizing a study mid-stream*].

8. Conceptualizing II

Required:

Campbell, M. & Gregor, F. (2004). Analyzing data in Institutional Ethnography, pp 83-101. In: Mapping Social Relations: A Primer in Doing Institutional Ethnography. Walnut Creek, CA, AltaMira Press.

Empirical example:

Winkelman, W.J. & Davis Halifax, N. (2007). Power is only skin deep: An Institutional Ethnography of nurse-driven outpatient psoriasis treatment in the era of clinic web sites. Journal of Medical Systems, 31, 131-139.

9. Analytic questioning and the interpretation of visual data

Required:

Piper, H. and Frankham, J. "Seeing voices and hearing pictures: image as discourse and the framing of image-based research", *Discourse: studies in the cultural politics of education*, 2007, 28(3) 373-387.

Yates, L. "The story they want to tell, and the visual story as evidence: young people, research authority and research purposes in the education and health domains", *Visual Studies*, 2010, 25(3) 280-291.

Additional:

Barker, J. and Smith, F. "What's in focus? A critical discussion of photography, children and young people, *International Journal of Social Research Methodology*, 15 (2) March 2012, 91-103.

Clarke, A. "Mapping visual discourses", Chap 6 in A. Clarke, *Situational Analysis*, Sage, 2005, pp 205-260.

Harper, D. "Reimagining visual methods", Denzin & Lincoln, *Handbook*, 2000: 717-732
 Harrison, B. (2002). Seeing health and illness worlds - using visual methodologies in a sociology of health and illness: a methodological review. *Sociology of Health And Illness*, 24, 856-872

Heath, C. & Hindmarsh, J. (2002). Analysing interaction: Video, ethnography and situated conduct. In T.May (Ed.), *Qualitative Research in Action* (Thousand Oaks: Sage

Banks, M. (2001). *Visual Methods in Social Research*. London, Sage

10. Theorizing

Required:

Sandelowski, M. Theory unmasked: the uses and guises of theory in qualitative research”, *Research in Nursing and Health*, 1993, 16:213-218

Alasuutari, P. “Theorizing in qualitative research: A cultural studies perspective”, *Qualitative Inquiry*, 2(4) 1996: 371-384

Empirical examples: (read /skim and looking for different types of theorizations):

Antoniou T, Loutfy, MR, Glazier RH, et al. ‘Waiting at the dinner table for scraps’: a qualitative study of the help-seeking experiences of heterosexual men living with HIV infection. *BMJ Open* 2012;2:e000697. doi:10.1136/bmjopen-2011-000697

Kontos, P. “Ethnographic reflections on selfhood, embodiment and Alzheimer’s disease”, *Aging & Society*, 2004:829-849.

Wheatley, E. “Discipline and resistance: Order and disorder in a cardiac rehabilitation clinic” *Qualitative Health Research*, 15(4) April 2005:438-459

Moore, D. ‘Workers’, ‘clients’ and the struggle over needs: Understanding encounters between service providers and injecting drug users in an Australian city”, *Social Science and Medicine* 68 (6), March 2009: 1161-1168.

Additional:

See ‘additional’ readings under Conceptualizing I.

Kontos, P., Miller, K-L., Mitchell, G., Cott, C. “Dementia Care at the Intersection of Regulation and Reflexivity: A Critical Realist Perspective”, *Journal of Gerontology: Social Sciences*, 2012, 10.1093 [additional example of theorizing; useful laying out of critical realism as an approach]

11. Writing I: The Story

Required:

Sandelowski, M. “Writing a good read: Strategies for re-presenting qualitative data”, *Research in Nursing and Health*, 1998, 21, 375-382.

Golden-Biddle, K and Locke, K., “Crafting the storyline”, Chapter 2, *Composing Qualitative Research*, Sage, 1997:21-70

Evans, P. “Boundary oscillations: epistemological and genre transformation during the ‘method’ of thesis writing”, *Int. J. Social Research Methodology*, 2000, 3 (4): 267-286

Empirical example :

Kamoche, K, and K. Maguire, “Pit sense: Appropriation of practice-based knowledge in a UK coalmine”, *Human Relations*, 2010, 64 (5) 725-744.

Additional :

12. Writing II: The words

Required:

Review all ‘empirical example’ papers from previous weeks and identify features of the *writing form*: ie use of evidence, use of literature, metaphors, general structure,

confidentiality style, grammatical features (eg verb tense), voice, features that make the paper particularly effective (or not so) etc.

For exercise in class bring the article (assigned in session on Conceptualizing I): Gladstone, B., McKeever, P., Seeman, M. & Boydell, K. (2014). Analysis of a support group for children of parents with mental illnesses: Managing stressful situations, *Qualitative Health Research*, 24(9): 1171-1182. doi: 10.1177/1049732314528068.

Course Requirements and Evaluation

There are three (3) requirements for this course. All are designed to facilitate students’ own research-in-progress (accommodating different interests, topics, and stage of research) while developing generic methodological knowledge and skills.

In the interest of fairness, extensions of submission dates are not normally granted, so please organize yourselves to get assignments in by the due dates.

Assignment 1.	Reflection Paper (20% of final grade) : Due: Sept. 30th
Assignment 2.	Reflection Paper (30% of final grade) : Due: Nov. 4th
Assignment 3.	Major Paper (50% of final grade): Due: Dec.2nd (deliver hard copy to DLSPH Grad office 620 HSB by 4:30 pm)

Assignments 1 and 2 : Reflection Papers

For these assignments you are expected to engage actively with the required course readings and with class presentations and discussions and to *relate the readings and the class material to your own research*. They are a sort of ‘digest-and-relate’ exercise intended to get you thinking and writing about analysis theoretically, and able to bring analytic ideas and practices to bear on your own research data and situation.

For these papers you are expected to draw on *both* readings and class presentations & discussion, as relevant. You are expected to *use* ideas/approaches/analysis elements from the readings or the class to ***think about your own research analysis, or to take up (and further develop) the methodological issue in general.***

When you read the literature each week and hear what is presented in class, ask yourselves such things as:

- What does this have to offer *me* for my process of analysis?
- what is *generic/general* about the particular article/class content that has relevance to me?
- Are there key concepts or ideas that grab me?
- Does it make me *think differently* about my own data, analysis, research problem? How and why?
- Does it suggest a different approach to my analysis than I am currently taking?
- Do my research questions as currently framed “fit” with such analytic approaches? (why, why not?)
- What does (or does not) resonate with my past experience/existing knowledge and current practices of qualitative analysis?
- Can I try out a concept/technique/approach on my own material?

You can take up any aspect of the readings /class material – whatever is most useful to you and relevant to your own on-going research. This can be, for example, an issue raised in one article or a theme running through several readings, a key methodological point, a particular strategy or analytic device, etc. The point is to ‘try out’, experiment with, critique, elaborate or otherwise reflect on what the readings and class might have to offer your own research.

Emphasis should be on depth rather than on breadth – ie consider a particular matter carefully and thoughtfully, rather than writing a general, non-specific piece. The papers will be assessed on your grasp of the reading material and of the issues (as reflected in

your discussion of its relevance to your own work), your methodological insight and sophistication (as reflected in how you identify, frame, focus and construct the issue, evidence that you are going beyond elementary grasp of the method), and your ability to articulate matters of method (extent to which you can explain/make clear what your main point is, what you know and mean). Ideally, some of you will be able to use some of these reflections when you are actually writing your thesis proposal or your methods chapter in your dissertation.

The papers can relate to any reading/class (or combination of) up to and including the day the paper is due. However, the two papers *must deal with different topics/issues* and not draw centrally on the same readings. Be sure to start the paper with a brief but very clear lay-out of the specific matter you are focusing on. That is, get it straight what you are aiming to do/achieve in the paper. Ensure that you make it clear what author(s) or idea(s) or class content you are drawing on, or orienting yourself towards.

Each paper should be about 5-6-pages (1 ½ spacing), not counting references. Hard copies of assignments should be submitted in class.

Assignment 3: Major Paper

You have three options for this assignment (details below). All must be *based on and demonstrate* what you have learned in this course. Choose *one* of:

Option 1 annotated (methodological) analysis of data

Option 2 Draft the analysis section (or part of it) for your proposal or thesis

Option 3 Analysis of a published empirical article with a focus on analysis, interpretation and writing

Option 1: Annotated analysis of data

For this option you are asked to:

- a) analyze (or re-analyze) some of your own data (current or past work that you have done yourself (like a Master's thesis, or data from another project you have worked on extensively and are intimate with, perhaps as an RA), *and*
- b) comment *methodologically* and reflexively on what you do.

You can situate yourself at any stage/location of analysis. Take on whatever is most relevant to you – early coding and analysis, using particular analytic strategies or devices, identifying themes, memo writing, developing concepts, theorizing, writing etc. Describe the process and/or the result of your analysis and then reflect critically on what you have done from a methodological point of view (e.g. what difficulties did you have? What seemed to work or not? Do you have any concerns about what you have done?). Of course, it is recognized that the piece of analysis offered in this assignment might only be a small, partial fragment of the overall analysis, and still “half baked” and in-progress.

It is expected that you will actively draw on this course to do this assignment. Thus it is not sufficient for this assignment to just plug in some analysis that you have already done without evidencing the specific knowledge/perspective gained in the course. Take on something new, or re-do something you might already have done but in the light of the

course. This is the place to take some risks with your analysis – you will be graded less on the end result as much as on *the methodological insight and reflexivity which you bring to the effort*, and on the *grounding of your comments in the course*. This option can involve development of material presented in class, incorporating new ideas gleaned in the process.

Option 2 : Draft the analysis part of methods section/chapter for your thesis

This option is for those students who are in the midst of analyzing their own thesis data. Here you will try to characterize, describe and discuss the approach and procedures you used/are taking for *analyzing and interpreting your data*. Do not take on the thesis' methodology as a whole, just the *section dealing with analysis/interpretation*, although it is expected that you link your discussion of analysis with other elements/stages of the research (e.g. to how the data were generated, and to the theoretical perspective of the study etc.). Your discussion of the analysis should be referenced (including course materials), provide a rationale/logic for the approach being taken (or not taken), and show a grasp of the methodological process and issues involved. Ask yourself questions like:

- what general approach to analysis am I taking?
- Am I taking a relatively homogeneous approach, or combining various elements from different strategies? Are they compatible?
- are there alternatives? what is the logic for approaching the data this way?
- what specific analytic methods/procedures am I taking, with what effect?
- are there particular or special issues of analysis and interpretation related to my topic/situation and how am I handling them?
- what aspects of the data collection situation/context has significance for analysis and interpretation?
- what are the strengths/limitations of the approach and procedures I am taking to analysis?
- how am I using literature and existing theory in my analysis? How do I write this into the description of the method?

Clearly you will not all be at the end point of the analysis, so your account of what you did and how you got there will be incomplete. It is an unfinished story – but at least you will get some start on thinking about how you will write your method.

Option 3: Analysis of published empirical article in relation to analysis, interpretation and writing

A third option is for students (especially those who are at the proposal stage and do not yet have their own data and analysis underway). Students should choose a recent qualitative paper from the list of journals listed in the reference section of this outline. The paper should be one that reports on an empirical (involving 'data') qualitative research project (*not* a mixed method one (**at least not one that mixes positivist and interpretive methods**), nor a conceptual or review article) that you *consider (at least at the outset of the exercise) to be an excellent* paper. Using what you have learned in the course (from course readings, in-class discussions), describe the following aspects of the paper (some will be more relevant than others). Be sure to indicate how you know or

recognize these things (i.e. give examples/evidence from the text). Comment on how effective/satisfactory (or not) you find the particular feature or aspect you are discussing.

- is there a main 'story' or point of the article? what kind of a story is it?
- how is the article positioned (audience? theory or problem/practice oriented?)
- how is the researcher/author positioned in the analysis?
- how is the paper structured/framed (how is the story told)?
- what general theoretical perspective frames the analysis?
- what approach to analysis and interpretation was taken and how was this communicated in the paper? what was not included (with what effect?)?
- what rhetorical/literary devices are used in writing?
- how are data presented and used ?
- are data/findings theorized? Is the theorization convincing? (why, why not?)
- how are the subjects of research represented?
- What made you consider the article 'excellent'? (or if you changed your mind as you got into it, what did you not end up liking about it?).

Finish your paper with a short paragraph saying what is the most important thing that you learned from this exercise that informs your own ability to analyze, interpret and write/publish.

Assignment 3, whatever option, should be *no longer* than 12 pages (1 ½ spaced). If you chose option 3, be sure to include with the paper a hard copy (easily legible) of the article analyzed. If you are analyzing some data, as in Option 1, you should include as appendix the material you are working on, or part of it, or an example of it. (Note: this includes visual material or data of some other type that the reader can easily access alongside your analysis). A hard copy of the assignment should be submitted to the Graduate Office room 620 in HSB no later than 4:30 pm December 2 (a week following the last Tuesday class).

Student In-Class Presentations

The final hour of all classes will be devoted to class discussion of students' own work. One student per class will present some aspect of their research which has previously been discussed with the instructor. However, because there are only 11 sessions in the course (after the first week), only 11 students can present. If enrolment is more than that, priority will be given on the following basis:

1. those students who are at the stage of analyzing their own thesis data
2. those who are working on data not their own but from a study they were deeply involved in
3. other students who are considered by the instructor to be at a stage (or have a topic) that might be suited to this exercise and benefit the class.

Unfortunately this may leave out students who are taking the course in the pre-proposal stage of their programs and others who might like to put their research up for discussion.

The purposes of the student presentations in this course are multiple, and pertain to both the students presenting and to those in the class listening/participating:

- to help students get a handle on their own analyses
- to enhance students' ability to speak about and articulate methodological issues in qualitative research
- to give students ideas from others regarding their own research projects
- to inform students' thinking and preparation of assignments during the course
- to give the instructor a teaching 'prop' to address common issues and points as they arise, and in relation to concrete projects (ie it is vehicle for teaching).

Process for Presentation: Presenting students can speak to any on-going problem or issue they are having with their own research as long as it is either directly about analysis, or has significant implications for analysis and interpretation. *All presentations must be discussed with the instructor in person or by e-mail beforehand* to ensure that the presenting student and the class as whole get the maximum benefit from comments and questions from the instructor and the others in the class. What typically happens is that the week before the session at which a student will present, she/he will contact the instructor (usually by e-mail) laying out what they have in mind. The instructor will write back, suggesting things to think about, other possibilities etc and the student will revise accordingly. There might be some back and forth. The intent is to offer the students some 'private' one-on-one consultation on their own research, and to help the student develop a session that makes sense for the one hour session and that 'works' to engage the other students in the class. Thus, it has to be clear what the presenter is seeking input on, and the setup must be right for the listeners to engage, make suggestions, offer alternatives from their own experience etc. The e-mail exchanges, and the class discussions, can be frank and sometimes unsettling for the presenters because they can raise difficult questions, but they also can provide fresh insight and stimulating alternatives that are highly useful to student presenter.

Note that since the instructor will use the student presentation as a teaching opportunity, students should expect interjections & commentary from the instructor that will draw out generic issues, link to past/future topics, ask key questions etc. These are thus informal *working* sessions and not formal presentations of end products (ie this is not an uninterrupted presentation like at a conference or to a committee).

Presenting students should try to do the following:

- Try not to cover too much. If you do too much, useful discussion rarely ensues (this is the most typical mistake students make – taking on too much for the time)
- Have a clear focus, make it clear what you want to do, and what sort of input/feedback you might like from the group.
- Get the class into your project and head space VERY succinctly – give just enough so they know where you are and where you are coming from – but do not spend much time in a general introduction to your topic.(eg no need to provide the entire rationale/background for the study)

- Plan presentation material that takes about 15 minutes, no more, to allow for lots of discussion, student and instructor comments etc. Issues will be raised that are new or that you hadn't anticipated so you want to have time to discuss as they arise.

Presentations can be made in any class session, from week 2 on. Who will present when will be discussed on the first day of class and confirmed the second week. *Presentations will not contribute to the final grade.* They will, however, require some extra time commitment to the course above and beyond the weekly readings and assignments.
